# November 2017

**Last updated:** Nov 22, 2017, 11:23 AM by Ilana Sacknovitz **Page restriction:** Semi-Public

New updates to this page are now published in the new Knowledge Portal. Learn more in the FAQ.

Please note that a customers Homescreen environment will need to be moved to the latest version which includes the ability to enable personalization on a per profile basis (please refer to the release notes for July 2017 regarding Personalization) before the October 2017 release can be made available.

Whilst every effort has been made to reduce the potential impact of migrating to the latest Homecreen version, due to the highly customizable nature of the campusM solution, there is a need for each institution to review the impact of this change in their own development environment first, before releasing directly to production. Therefore, any requests for this release will first be made on the institution's Development App in the first instance.

| Development | Affected Platform |
|---|---|
| Addressed an issue that prevented the Homescreen from loading completely on a fresh install of the app, leaving the screen without any tiles - Fixed | • iOS App |
| Addressed an issue with the campusM External URL scheme that caused external linking from both tiles and within content to fail - Fixed | • Android App |
