Highlights and Enhancements

The JournalSearch User Interface was enhanced with a number of options requested by customers:

We added configuration options to add boxes for enumeration and to select service types to be included in the sidebar.

It is also now possible to choose to display the SFX Menu instead of the sidebar.

Customers can now choose to prioritize items in the result list where the main title contains the search words over those where the match is in the alternative title.

The JournalSearch User Interface now shows the 3 letter navigation also on the bottom of the page, in addition to the top.

Multi-Language Support

We added an option to add translations to the public names of services and targets. This is an enhancement voted for via NERS.

For Japanese language titles, the object load in DataLoader was changed to automatically load versions of the title in both writing systems (Hiragana and Katakana) even if the load file only contains one version.
