Recent Improvement to Print and eBook Facets

SEARCH AND EXPLORING

NERS

- Resolved issue with Summon over Alma configuration of feature reverting to “off”
- Improved process for including electronic materials in faceted results
- Implemented toggle between facets to prevent use in combination
  - To achieve an include or exclude of both formats, use the Book/eBook facet value under Content Type

© 2021 Ex Libris | Confidential & Proprietary

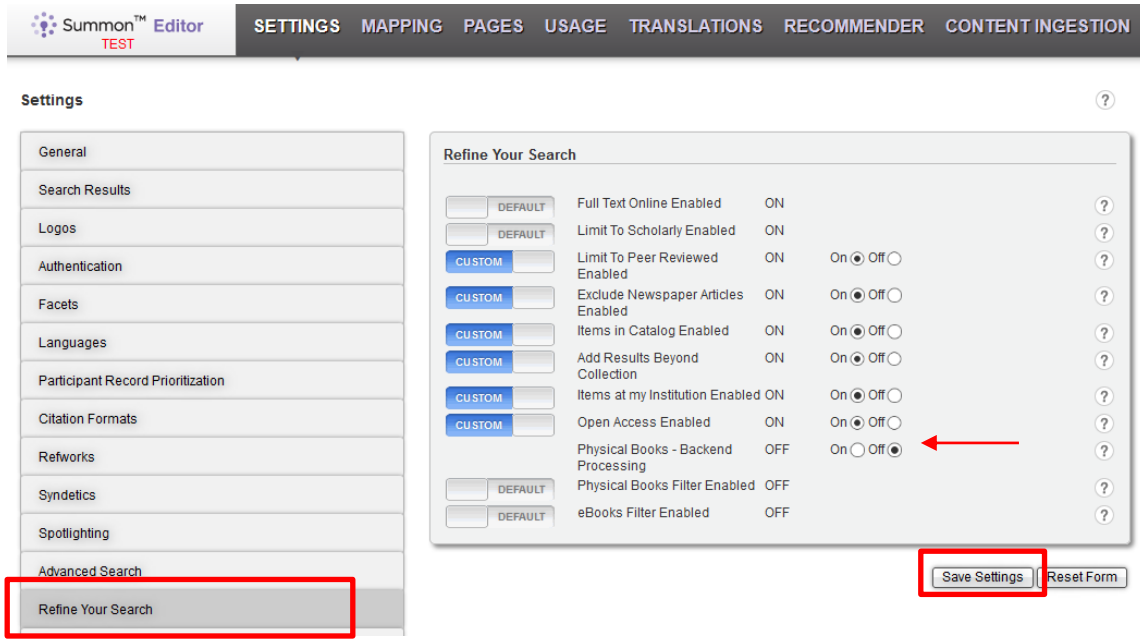

Separate Print from eBooks—Configuration

SEARCH AND EXPLORING

NERS

- Found under Settings > Refine Your Search

- First turn on “Physical Books – Backend Processing”
  - You’ll need to wait for an index update to be completed before the facet is ready
  - This process will not affect the existing Book/Ebook facet

© 2021 Ex Libris | Confidential & Proprietary

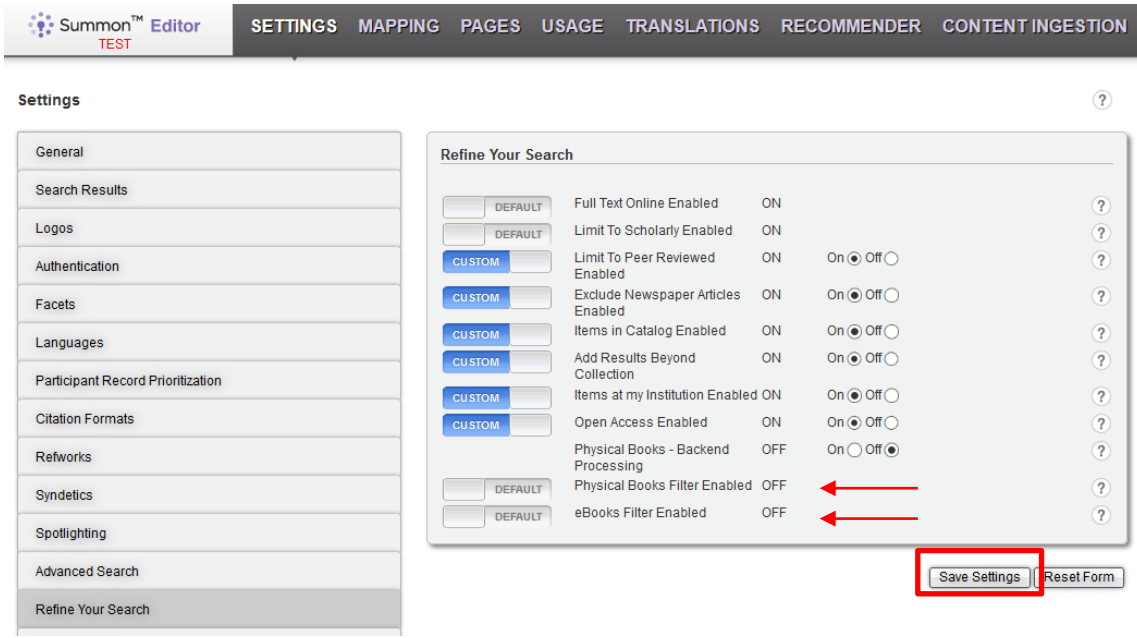

ExLibris a ProQuest Company

Separate Print from eBooks—Configuration

SEARCH AND EXPLORING

NERS

- Once an index process has been completed with the backend processing enabled you can turn on the facets
- For Print set “Physical Books Filter Enabled” to On
- For electronic books set “eBooks Filter Enabled” to On
    - Facets will appear within 5 minutes after enabled, or disappear if disabled

Exact Search—Additional Fields

SEARCH AND EXPLORING

NERS

What's Coming:

Add the functionality to do an exact search on certain fields

Highlights:

- Ability to select "exact match" on certain fields on the advanced search page
- Possible fields to include: Call Number, ISBN, ISSN, DOI, OCLC Number and Patent Number

Faster, more targeted discovery of known items for end users

Release planned: December 2021

© 2021 Ex Libris | Confidential & Proprietary

ExLibris a ProQuest Company

Additional Fields for Advanced Search

- Call Number
- ISBN
- ISSN
- CODEN
- Dewey
- DOI
- OCLC Number
- Patent Number
- EAN
- EBSCOAN
- ERIC
- ISMN
- LCC
- NAICS
- ORCID
- PCID
- PMID
- PQID
- PQPubID
- SSID
- UPC
- DUNS
- SICI

Note: “Select All” for searching all fields at once will not be listed as an option. A user can search all by selecting all fields, but selecting every field as an exact match may result in a slower response time.

RESEARCH ARTICLE

Genetic diversity and genetic structure of Northern Goshawk (*Accipiter gentilis*) populations in eastern Japan and Central Asia

Yoshihide Takaki · Takayuki Kawahara · Hisashi Kitamura · Ko-ichi Endo · Takuma Kudo

Received: 17 May 2007 / Accepted: 11 March 2008 / Published online: 25 March 2008
© Springer Science+Business Media B.V. 2008

Abstract Japanese goshawk was classified as a vulnerable species in the Red Data Book. There have been possibilities of a decrease of genetic diversity accompanied by habitat loss and genetic pollution due to hybridization with escaping imported goshawks. In this paper, genetic diversity, gene flow and conservation of Northern Goshawk (*Accipiter gentilis*) in Japan are discussed and compared with that in Central Asia. We used 11 newly developed microsatellite markers and also adopted six previously published markers. Genetic diversity was shown to be maintained with 0.58 as mean heterozygosity and 3.95 as mean allelic richness. The degree of genetic differentiation across all populations was low (Nei's genetic differentiation index = 0.036, Wright's genetic differentiation index = 0.039), possibly due to gene flow via adjacent regions (average number of migrants = 4.26; 0.68–20.30). However, it is possible that slight differentiation resulted from the short divergence time and/or inflow of escaping imported individuals. We recommend that goshawks in eastern Japan should be managed as a single unit. They do not appear to be under threat genetically at present, but there is the potential for rapid loss of genetic diversity. For future conservation, investigations of dispersal routes and actual conditions of gene flow are also recommended. To prevent further inflow of escaping goshawks into natural populations, it is desirable to reduce importation of goshawks and to enact a regulation obliging purchasers to register imported goshawks.

Keywords Northern Goshawk · Genetic diversity · Genetic structure · Gene flow · Microsatellite markers

Introduction

The Northern Goshawk (*Accipiter gentilis*) is a medium-sized forest raptor, widely distributed from the subarctic zone to the temperate zone of the northern hemisphere (Cramp and Simmons 1980; del Hoyo et al. 1994). According to the Ministry of the Environment, there are about 2,000 breeding adults in Japan. Because this bird often inhabits a mosaic landscape composed of isolated forests, agricultural areas and paddy fields in Japan (Suzuki 1999; Ezaki et al. 2000), there has been growing concern for its habitat loss due to the construction of housing, factories and roads. Furthermore, this species has been

Kierkegaard's Theatrical Aesthetic from Repetition to Imitation

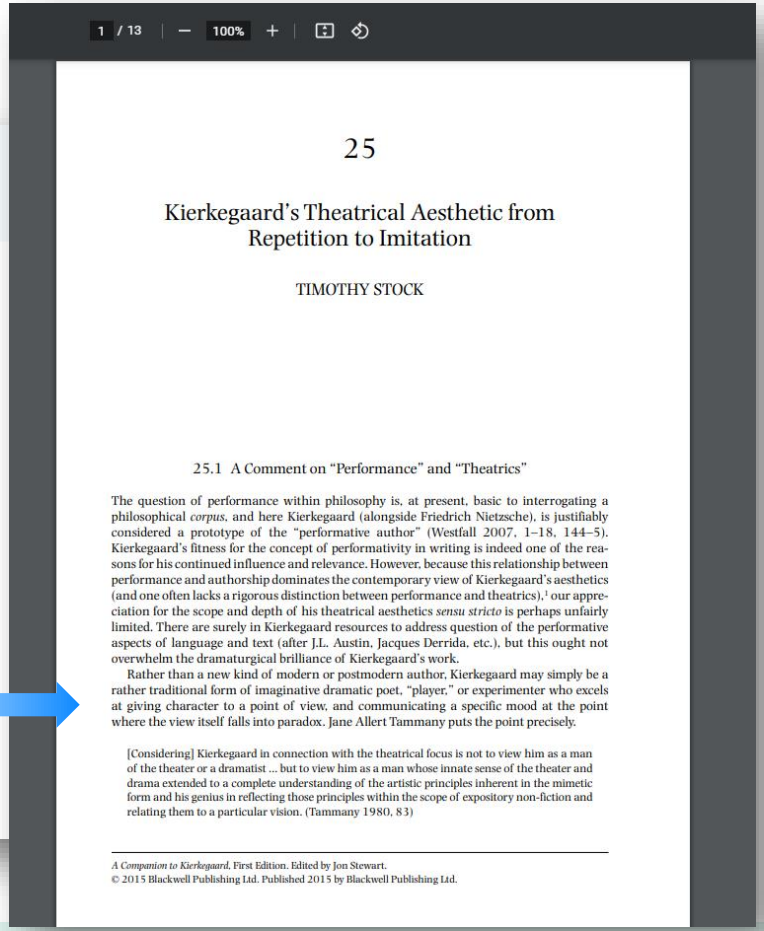

by Stewart, Jon

A Companion to Kierkegaard, 08/2015

Kierkegaard's life-long interest in the theater is well documented and reflects the deep impact of Golden Age Denmark's vibrant **theatrical** culture on his thinking...

Kierkegaard's Theatrical Aesthetic from Repetition to Imitation

TIMOTHY STOCK

25.1 A Comment on "Performance" and "Theatrics"

The question of performance within philosophy is, at present, basic to interrogating a philosophical *corpus*, and here Kierkegaard (alongside Friedrich Nietzsche), is justifiably considered a prototype of the "performative author" (Westfall 2007, 1–18, 144–5). Kierkegaard's fitness for the concept of performativity in writing is indeed one of the reasons for his continued influence and relevance. However, because this relationship between performance and authorship dominates the contemporary view of Kierkegaard's aesthetics (and one often lacks a rigorous distinction between performance and theatrics),[1] our appreciation for the scope and depth of his theatrical aesthetics *sensu stricto* is perhaps unfairly limited. There are surely in Kierkegaard resources to address question of the performative aspects of language and text (after J.L. Austin, Jacques Derrida, etc.), but this ought not overwhelm the dramaturgical brilliance of Kierkegaard's work.

Rather than a new kind of modern or postmodern author, Kierkegaard may simply be a rather traditional form of imaginative dramatic poet, "player," or experimenter who excels at giving character to a point of view, and communicating a specific mood at the point where the view itself falls into paradox. Jane Allert Tammany puts the point precisely.

> [Considering] Kierkegaard in connection with the theatrical focus is not to view him as a man of the theater or a dramatist ... but to view him as a man whose innate sense of the theater and drama extended to a complete understanding of the artistic principles inherent in the mimetic form and his genius in reflecting those principles within the scope of expository non-fiction and relating them to a particular vision. (Tammany 1980, 83)

Quicklinks at a glance

What are Quicklinks?

- Links to the pdf or html full text directly from the result list
- The provide convenience for the user! With Quicklinks the full text is just one click away
- Created centrally, they do not use the link resolver
- Works with selected providers – we start with a small list and extend the list over time

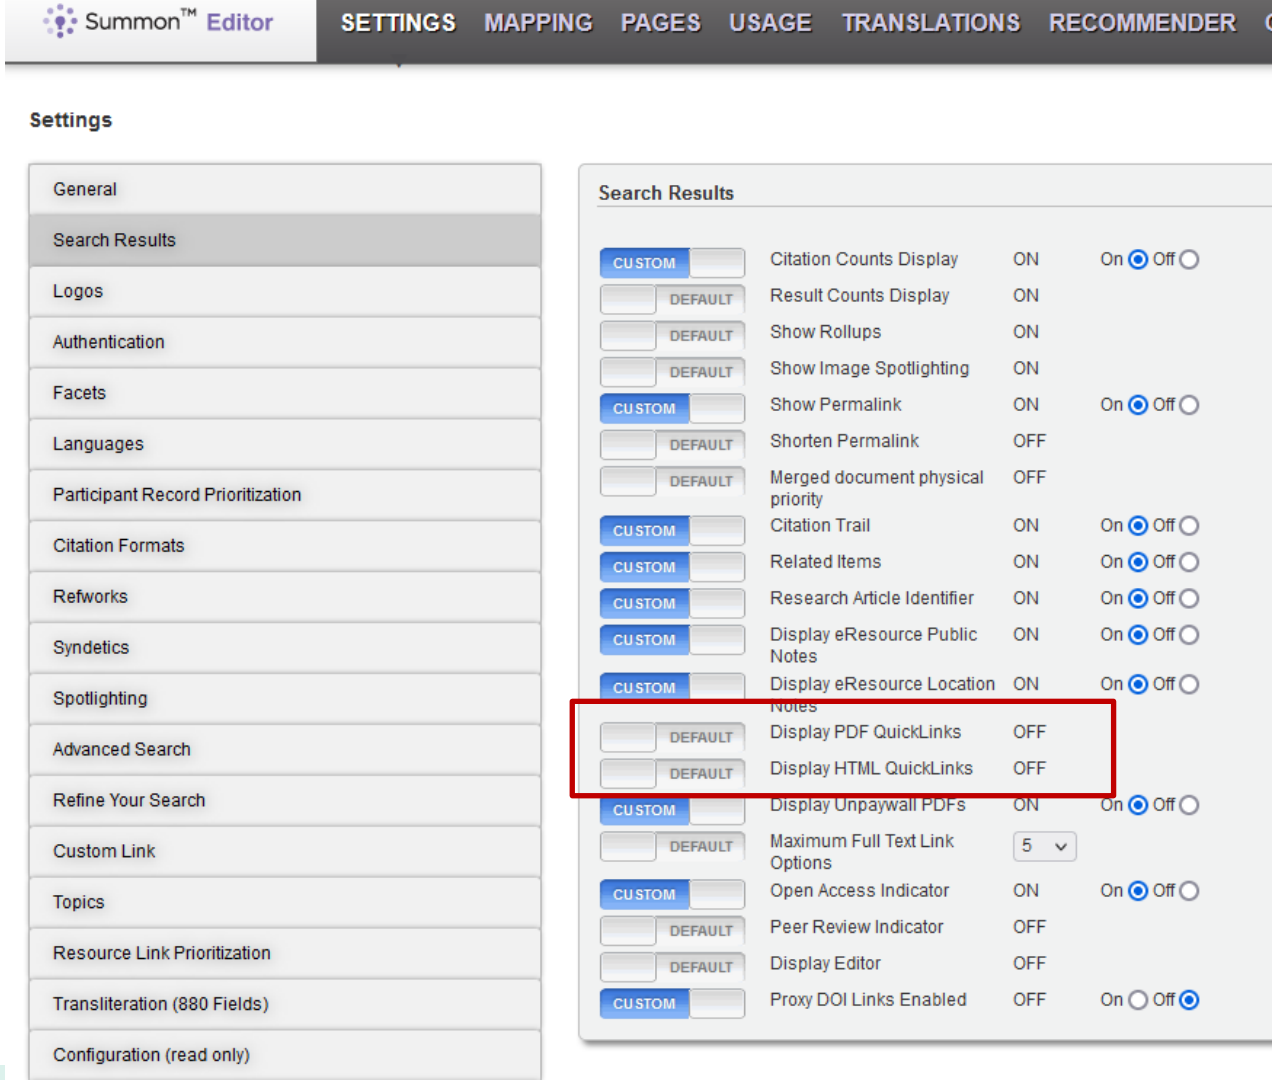

When do Quicklinks appear?

- You switched it on for your environment
- The record has sufficient metadata including a DOI or a PQID to support reliable links
- You have full text rights for this record for at least one provider supporting Quicklinks
- Quicklinks can appear for different material types but primarily for articles, books, and book chapters
